Note: Consumer Price Index (CPI) obtained from the U.S. Bureau of Labor Statistics. The change in the CPI for all Urban Consumers, the percentage change that this table reports, is calculated from December to December. Salary increases for the years to 1985–86 are grouped in two-year intervals in order to present the full 1971–72 through current year series. Nominal salary is measured in current dollars. The percentage increase in real terms is the percentage increase in nominal terms adjusted for the percentage change in the CPI. Figures for All Faculty represent changes in salary levels from a given year to the next. Figures for Continuing Faculty represent the average salary change for faculty on staff at the same institution in both years over which the salary change is calculated.
